# Handshakes (SEER)

Process large amounts of text, intelligently

Our proprietary, award-winning machine learning technology uses natural language processing AI to read text, understand content, and deliver actionable insights.

Why Handshakes Seer?

Finally harness your data for insights

Processing a growing pool of data yourself is impractical, or plain impossible. With our AI technology, this text (structured and unstructured) can be automatically read, extracted and classified – so you can focus on the analysis and decision-making.
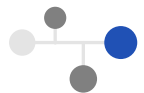

Get machines optimised for corporate purposes

Our machines have the benefit of learning from our big (and still growing) pool of corporate registry and capital markets data, making them optimal for corporate applications.

Enjoy support from our machine learning experts

With Seer, our machine learning team is here to help you build and optimise your AI models, so you don't have to.

Optimise workflows with a customised AI solution

Speed up workflows from day one, with a solution that's modified to your specific concerns and desired outputs.

Clients and accreditation

Our technology drives giants

Our award-winning AI technology powers ScoutAsia – a platform jointly developed by Nikkei and the Financial Times, as well as Singapore Press Holding's content recommendation engine.

NIKKEI   **FT** FINANCIAL TIMES   **sph**

We are SG:D Accredited

You can be assured of our product's core functionalities, our ability to deliver as promised, and your data security.
